

Capabilities

Bette & Cring has the knowledge, personnel, and equipment to perform a full range of construction activities including site work, concrete, masonry, carpentry, and structural steel erection. From low and hi-rise residential communities, to heavy highway and bridge construction, the company can undertake projects of nearly every size and complexity.

Project Management Philosophy

Our project management philosophy ensures that our client maintains a close working relationship with the firm's principals and provides for significant client input and interaction throughout all phases of the project.

For our clients looking for the convenience of a complete lease or turnkey project, we can offer fully integrated delivery of your project no matter how exhausting the schedule or how challenging the task. Either way, our clients feel confident that their project is well designed and that it has been executed in the most efficient and economical way possible.

The BETTE Companies are consistently ranked by *Engineering News-Record* among the top 200 general contractors, the top 100 "at-risk" construction managers and the top 20 multi-family builders in the nation.

First Columbia – A development company offering a broad range of project expertise spanning medical, commercial, technology, recreational and residential properties. No matter what size project, the firm consolidates resources ranging from market research to planning to architecture, financing, and project delivery and management.

BBL Texas – Specializing in the construction of multi-family rental communities since 1991. Based in Irving, Texas we successfully deliver over 2000 units each year.

BBL Florida – Based in the Naples-Fort Myers area, our Florida construction company specializes in for sale multi-family projects, ranging from golf course garden communities to 30 story luxury high-rise buildings.

COGEN Power Technologies – Employing a century's worth of engineering and material advances to deliver cogeneration at a new level of efficiency and reliability. Meet your facility's energy demands more economically while reducing your carbon footprint, increasing energy reliability, and extending the life of your current infrastructure.
